

# Texas Department of Public Safety Texas Division of Emergency Management

## Texas State Operations Center

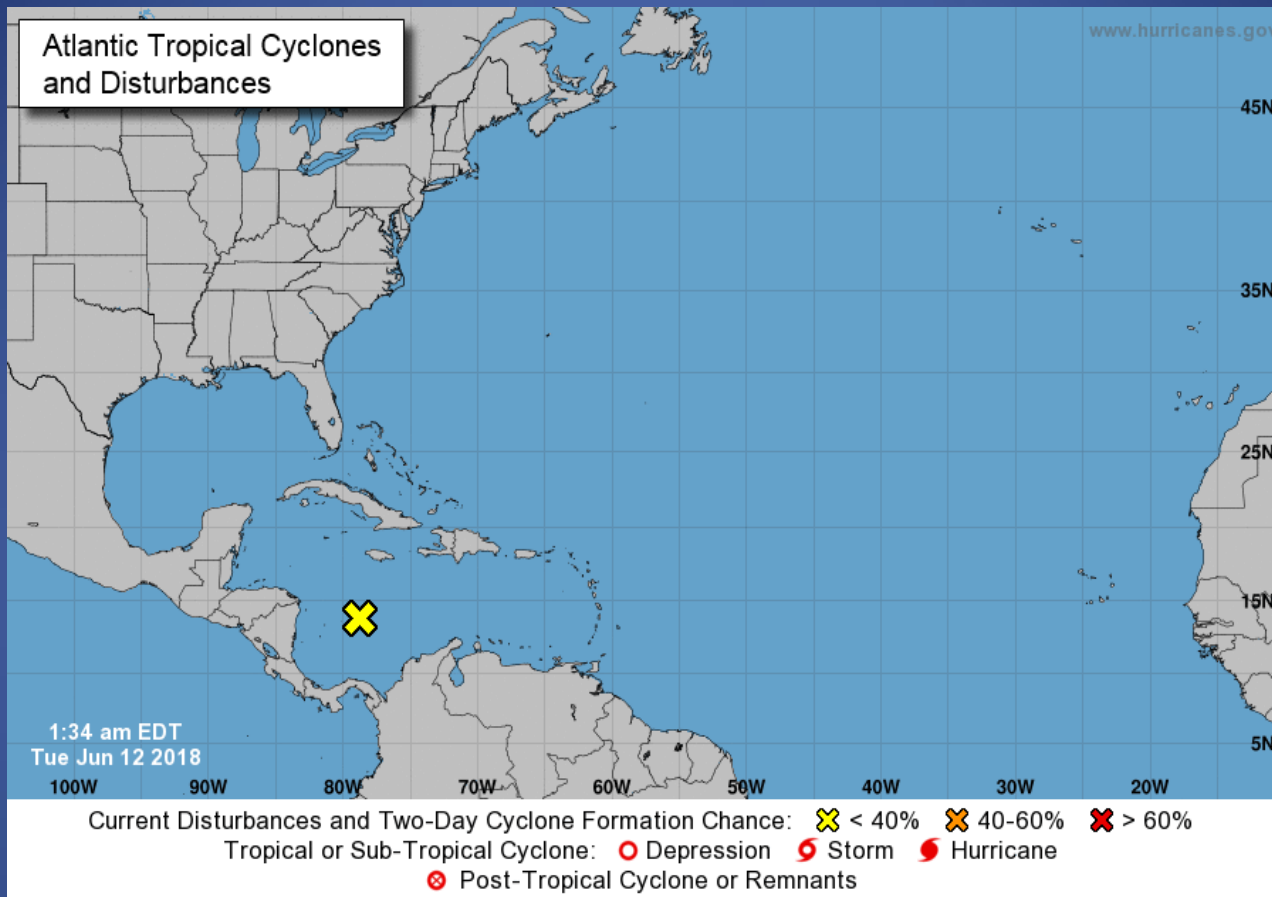

### Situation Awareness Brief

Tuesday, June 12<sup>th</sup> 2018  
As of 0900 CST

# Tropical Weather Awareness

For the North Atlantic...Caribbean Sea and the Gulf of Mexico: A large area of disorganized showers and thunderstorms over the western Caribbean Sea is associated with a trough of low pressure. This area of disturbed weather is expected to move westward to northwestward over Central America and the Yucatan Peninsula during the next couple of days, and little development is expected during that time due to unfavorable upper-level winds. Environmental conditions could become slightly more conducive for some development when the system moves into the southwestern Gulf of Mexico by the end of the week. Regardless of development, this disturbance will likely produce locally heavy rainfall across portions of Nicaragua, Honduras, Belize, Guatemala, and the Yucatan Peninsula through Thursday. \* Formation chance through 48 hours...low...10 percent. \* Formation chance through 5 days...low...20 percent.

# Incidents Reported to the State Operations Center (last 24 hours)

DATE	EVENT / INCIDENT	LOCATION (City/County)	Final Report: Y/N
06/11/18	Final Report of the Dinner Creek Wildfire	Briscoe County	Y

# Hazardous Weather

## Afternoon Temps and Storm Chances

Weather Forecast Office  
Fort Worth, TX  
Issued Jun 12, 2018 7:10 AM CDT

f t NWSFort Worth

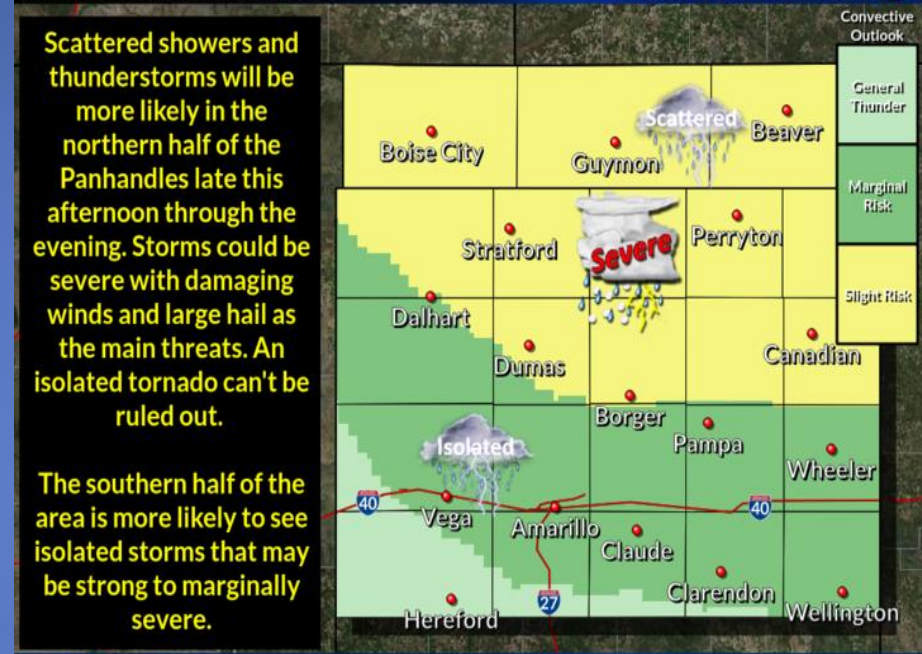

weather.gov/fortworth

It'll be hot again today with isolated to scattered showers and thunderstorms mainly to the east of I-35. Gusty winds and locally heavy rainfall will be the primary hazards. High temperatures will be in the lower 90s east to upper 90s west, with a south wind around 15 mph. You can expect some occasional gusts to 20-25 mph.

## Severe Storms Possible Today

Convective Storm Outlook after 4 PM

Weather Forecast Office  
Amarillo, TX  
Issued Jun 12, 2018 6:51 AM CDT

f t NWSAmarillo

weather.gov/ama

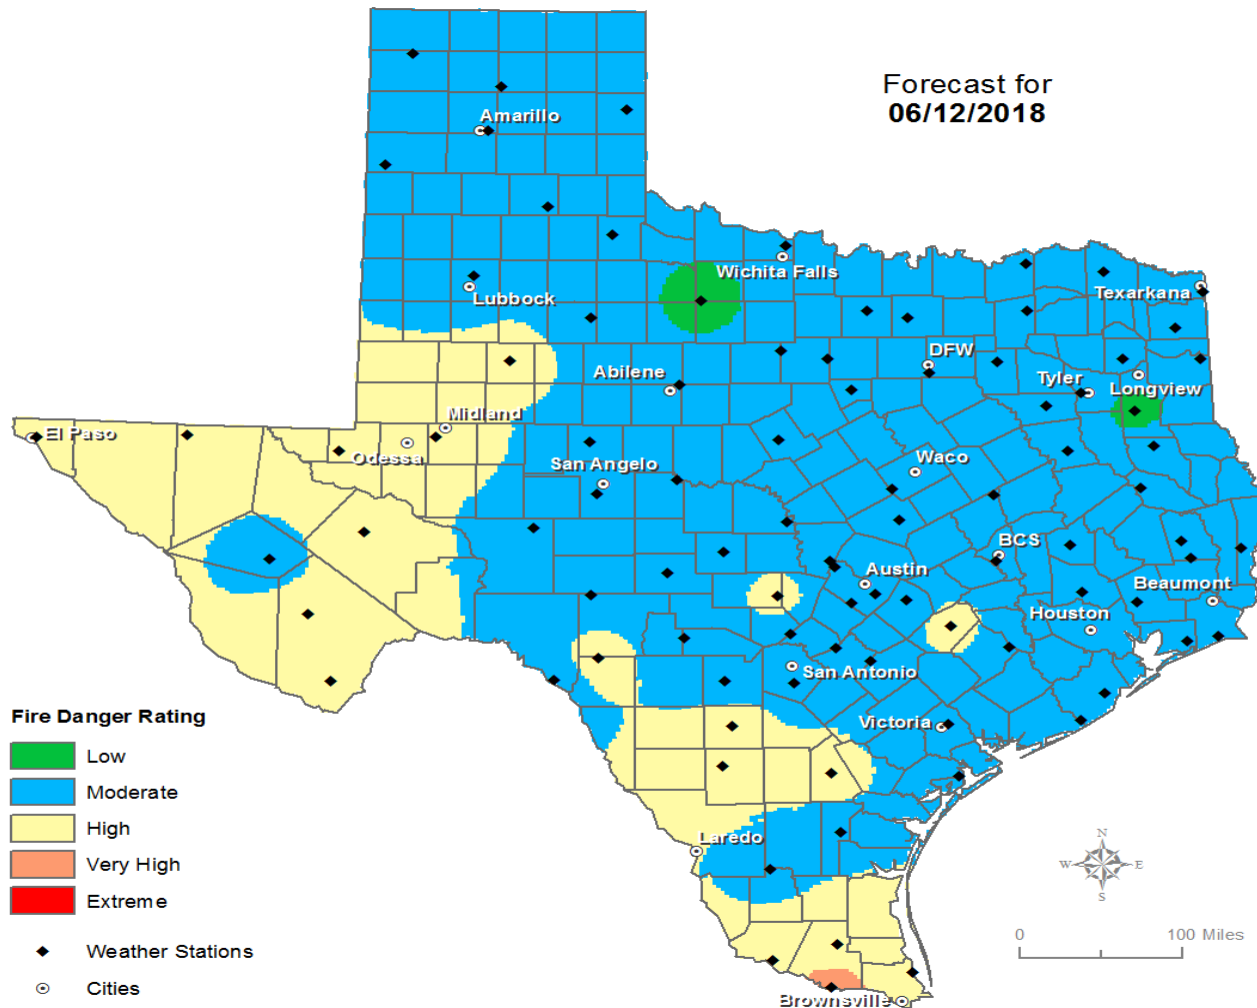

Isolated thunderstorms are possible in the southern half of the area and may be strong to marginally severe. The northern half of the Panhandles could see scattered storms and will be more likely to reach severe levels. Damaging winds and large hail will be the primary hazards, but an isolated tornado can't be ruled out.
